## **UKRAINE, SEPTEMBER-OCTOBER 2024**

### Summary page

Together with Ethos Solutions 501(c)(3) and the Ukrainian non-governmental organization Forca Ukraine, we successfully conducted two in-country training courses aimed at medical providers in Ukraine, ranging from medics to physicians.

#### **Course 1: Damage Control Resuscitation: Focus on Advanced Procedures**

This course combined a series of lectures with high-fidelity simulations, culminating in a mass casualty simulation. Expert personnel with extensive trauma and special operations backgrounds delivered the lectures. Ten participants were trained in advanced medical procedures.

#### **Course 2: Damage Control Surgery: Focus on Extremity Injuries**

In parallel, a surgical techniques course was offered with two cohorts of trainee surgeons. Each cohort consisted of 8 surgeons who received training from a team of a surgeon and emergency physicians.

The successful completion of these courses marks a significant step in enhancing the medical response capabilities for treating refugees and others in Ukraine, providing critical skills and knowledge to medical providers.
