Refugee Relief International

Together with Ethos Solutions 501(c)3 we successfully conducted a training mission in Ukraine in August of 2026.

The training focused on medical providers in the south of the country, where frequent attacks from drones and cruise missiles are a constant threat and there are numerous internally displaced refugees requiring medical care. Training predominantly focused on traumatic injuries, with a special focus on immediate post-injury care and prolonged field care, in case of a mass-casualty event or delays in evacuation.

The training included topics of extremity injuries, tourniquet application, tourniquet conversion, blast injuries, shock, temperature management and assorted topics on prolonged field care.

Exact numbers of trainees and locations are withheld for operational security considerations.
